1. Introduction

The *Petroleum (Environment) Regulations 2016* (PER) include a requirement for the interest holder to provide a report to the Minister on an annual basis that outlines the environmental performance of the interest holder (the Annual Environment Performance Report). The report must include sufficient information to allow the Minister to assess whether the interest holder has met the environmental outcomes and environmental performance standards included in the approved Environment Management Plan (EMP). The report is to consider information required to be recorded, monitored or reported under the PER and any other law in force in the Northern Territory related to conduct of the regulated activity.

This Annual Environmental Performance Report (AEPR) applies to the McArthur Basin Drilling Program that was approved on 21 February 2021 (Figure 1). The period covered by this AEPR is from 21 February 2023 to 20 February 2024.

1.1. Background

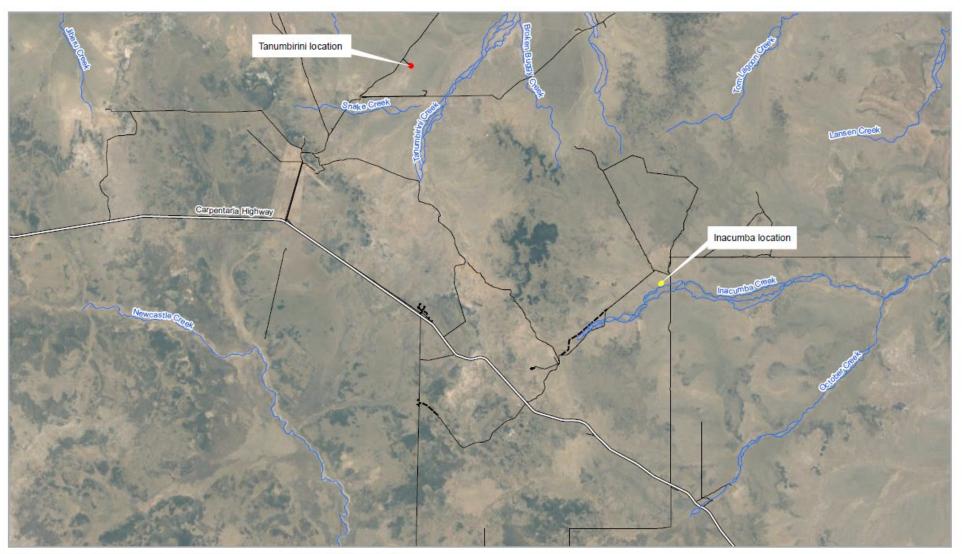

Santos QNT Pty Ltd (Santos) submitted the *McArthur Basin Drilling Program EP 161 EMP (STO2-7), Revision 5, September 2020 (EMP 2021)* under the PER that came into force 6 July 2016. EMP 2021 was submitted to cover the following scope:

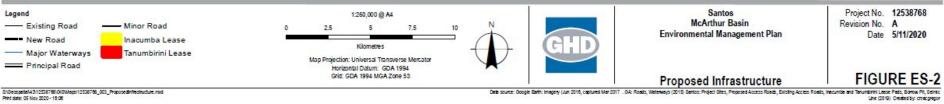

- Drilling of Inacumba 1 pilot well, Inacumba 1H horizontal well from the Inacumba 1 pilot well and Inacumba 2H well
- Drilling of Tanumbirini 2H well and Tanumbirni-3H well
- Evaluation of the wells
- Well integrity monitoring
- Suspension and/or plugging and decommissioning of the wells
- Rehabilitation of the wells

Under Regulation 22, three modifications to the regulated activity within the EMP have been approved:

- Additional drilling chemicals during the activities (21 May 2021)
- Additional drilling chemicals during the activities (8 September 2021)
- Update to the lateral sections of horizontal wells at Tanumbirini (not be separated by 50mTVD) and are planned to target the same shale interval (16 September 2021)
- Status of works:
- EMP 2021 was approved on 21 February 2021.
- This AEPR has been prepared to report on activities that have occurred under EMP 2021 between 21 February 2023 and 20 February 2024.
- No drilling activities were undertaken during the reporting period.

Santos

1.2. Contents of Performance Report

This AEPR describes the environmental performance of Santos by evaluation of the following:

- Compliance with Ministerial approval conditions for each EMP.
- Compliance with each environmental outcome and environmental performance standard within the EMP 2021.
- Compliance with reporting requirements in accordance with the Code and Regulations.
- All recordable and reportable incidents, including root cause analysis and related corrective actions to prevent re-occurrence.
- Findings of all regulatory inspections and audits and related actions to address any findings.

1.3. Assessment of Compliance

Table 1 shows the compliance status indicators used in this AEPR.

Table 1: Compliance descriptors

Indicator Description	
Compliant Compliant with requirement for the reporting period	
Not Compliant	Not compliant with the requirement during the reporting period
Not Applicable Requirement not applicable during the reporting period	

1.4. Evidence of Compliance

The following sources of evidence are used to demonstrate compliance:

- Internal monitoring of compliance by Santos through internal audits of compliance and reporting including incident reporting.
- Outcomes from regulator inspections conducted by the Department of Environment, Parks and Water Security (DEPWS) (Petroleum Operations Branch).
- Recordable and reportable incident reports submitted to DEPWS Petroleum Operations
- Reports provided to DEPWS, the Department of Industry Tourism and Trade (DITT) and other government agencies.

2. Demonstration of Compliance

Table 2 demonstrates Santos's compliance with Ministerial EMP approval conditions.

Table 2: Compliance with ministerial EMP approval conditions from 21 February 2023 until 20 February 2024.

ltem No.	Ministerial Condition	Compliance Status	Evidence
1.	 The interest holder must submit to the Department of Environment, Parks and Water Security (DEPWS), via Onshoregas.DEPWS@nt.gov.au: i. a timetable for the regulated activity that is to be provided prior to the commencement of the activity and each quarter thereafter, or more frequently should other constraints, such as seasonal weather forecasts or travel restrictions emerge, and including: time-bound commitments in the EMP due dates for satisfaction of Ministerial approval conditions due dates for regulatory reporting; and 	Not Applicable	No relevant regulated activities were undertaken during the reporting period
	 ii. during drilling, daily on-site reports indicating: the status and progress of drilling; the freeboard available in drilling sumps (in cm); notification of any halt to the activity due to wet season conditions; notification of any fires potentially threatening the activity from external or internal sources; and 	Not Applicable	No relevant regulated activities were undertaken during the reporting period
	iii. during non-operational periods in the wet season, weekly reports on the freeboard available in drilling sumps (in cm); and	Not Compliant	 Freeboard availability are checked via remote telemetry during non-operational period. These weekly reports are provided through to DEPWS. During the reporting period, one wees worth of reporting were not submitted through to DEPWS 9 February
	iv. a seven-day activity forecast for the duration of the activity during the wet season (1 October - 30 April each year); and	Not Applicable	No relevant regulated activities were undertaken during the reporting period
	v. weekly reports that detail the outcome of site inspections, and corrective actions taken, and inclusive of all commitments in the approved EMP, from the commencement of the regulated activity and continuing while the EMP remains in force.	Not Compliant	Site inspections are provided through to DEPWS. During the reporting period, two weeks' worth of reporting were not submitted through to DEPWS 9 February

			• 16 February
2.	In the event of any accidental release of contaminants that exceeds 200 litres (for liquids), the interest holder must provide a written report to DEPWS, via Onshoregas.DEPWS@nt.gov.au, as follows: i. within 24 hours, provide a written report with details of the incident specifying material facts and actions taken to avoid or mitigate environmental harm; and	Not Applicable	There were no accidental releases of contaminants exceeding 200 litres
	 ii. within 14 days of the incident, provide a written report detailing: a. the volume of impacted soil removed for appropriate disposal and the depth of any associated excavations; and b. the corrective actions taken or proposed to be taken to prevent recurrence of an incident of a similar nature. 	Not Applicable	There were no accidental releases of contaminants exceeding 200 litres
3.	The interest holder must provide an annual report to DEPWS, via Onshoregas.DEPWS@nt.gov.au, on its environmental performance, in accordance with item 11(1)(b) in schedule 1 of the Petroleum (Environment) Regulations 2016 (NT). The first report must cover the 12 month period from the date of the approval, and be provided within three calendar months of the end of the reporting period. The annual environmental performance report must align with the template prepared by DEPWS for this purpose.	Compliant	This Annual Environmental Performance Report.
4.	An emissions report must be provided to DEPWS by 30 September each year, via Onshoregas.DEPWS@nt.gov.au, which summarises actual annual greenhouse gas emissions reported under the Commonwealth National Greenhouse and Energy Reporting Act 2007 versus predicted emissions in the EMP.	Compliant	The emissions report was provided to DEPWS on 29 September 2023.
5.	In line with the approval conditions previously applied to the McArthur Basin drilling program, the interest holder must provide to DEPWS, via Onshoregas.DEPWS@nt.gov.au, a cementing report for the surface casing (13 3/8") through the aquifers, as soon as practicable but not more than fourteen days after completion of the cementing job for each well.	Not Applicable	No drilling was undertaken during the reporting period.
6.	In line with the approval conditions previously applied to the McArthur Basin drilling program, the interest holder must provide to DEPWS, via Onshoregas.DEPWS@nt.gov.au, the following: i. results of groundwater monitoring (excluding continuous electrical conductivity monitoring) from the Inacumba Unit at the Inacumba well site, in accordance with the Code and the Preliminary Guideline: Groundwater Monitoring Bores for Exploration Petroleum Wells in the Beetaloo Sub-basin (DENR, 2018) every quarter for three years from the approval date of the EMP for publishing on the DEPWS website, in a format to be provided by DEPWS;	Compliant	Groundwater monitoring was provided to DEPWS on the following dates: 09 March 2023 27 July 2023 20 September 2023 11 December 2023

	ii. results of continuous water level monitoring using water level loggers installed at the monitoring bores in the Inacumba Unit at the Inacumba well site, every quarter for three years for publishing on the DEPWS website, in a format to be provided by DEPWS; and	Compliant	Groundwater monitoring was provided to DEPWS on the following dates: 09 March 2023 27 July 2023 20 September 2023 11 December 2023
	iii. results of groundwater monitoring (excluding continuous electrical conductivity monitoring) from the Gum Ridge Formation at the Tanumbirini well site, in accordance with the Code and the Preliminary Guideline: Groundwater Monitoring Bores for Exploration Petroleum Wells in the Beetaloo Sub-basin (DENR, 2018) for the period the well sites are operational, for publishing on the DEPWS website, in a format to be provided by DEPWS.	Compliant	Groundwater monitoring was provided to DEPWS on the following dates: 09 March 2023 27 July 2023 20 September 2023 11 December 2023
7.	In support of clause B.4.17.2 of the Code, the interest holder must provide to DEPWS, via Onshoregas.depws@nt.gov.au, an interpretative report of groundwater quality based on the groundwater monitoring required to be conducted at the well site(s) in accordance with Table 6 of the Code. The interpretative report must be provided annually within three months of the anniversary of the approval date of the EMP and include: i. demonstration that there is no change to groundwater quality or level attributable to conduct of the regulated activity at the	Compliant	The interpretative report and non-technical summary on groundwater quality was provided to DEPWS on 18 May 2023
	well site(s); ii. interpretation of any statistical outliers observed from	Compliant	The interpretative report and non-technical summary on
	baseline measured values for each of the analytes;		groundwater quality was provided to DEPWS on 18 May 2023
	iii. discussion of any trends observed; and	Compliant	The interpretative report and non-technical summary on groundwater quality was provided to DEPWS on 18 May 2023
	iv. a summary of the results inclusive of descriptive statistics.	Compliant	The interpretative report and non-technical summary on groundwater quality was provided to DEPWS on 18 May 2023
8.	In line with the approval conditions previously applied to the McArthur Basin drilling program, and in support of clause of the Code, the interest holder must provide to DEPWS, via Onshoregas.DEPWS@nt.gov.au, no later than three months of completion of the drilling program, a report that: i. provides the outcome of assessment and leachability testing of residual drill fluids and drill cuttings; and	Compliant	The drilling program is not yet complete i.e the EMP is for drilling both Tanumbrini and Inacumba. Outcomes of assessment and leachability testing were submitted to DEPWS on the 18 August 2023.
	ii. provides the recommended disposal option.	Compliant	The drilling program is not yet complete i.e the EMP is for drilling both Tanumbrini and Inacumba. Recommended disposal options were submitted to DEPWS on the 18 Aug 2023. Consultation with DEPWS is ongoing

Table 3 provides a systematic overview of Santos's compliance with the environmental outcomes and environmental performance standards within the approved EMP.

ltem No.	Environmental Outcome	Environmental Performance Standard	Measurement Criteria	Compliance Status	Evidence
1.	No significant impact to threatened flora or fauna species, their habitat or sites of conservation significance resulting from conduct of the regulated activity.	Injury and disturbance to threatened fauna during the conduct of the activity will be minimised.	• Site induction records show all personnel have completed site inductions, which includes requirements for managing impacts to terrestrial fauna	Compliant	All personnel had required inductions in accordance with the Santos Management System.
			• IVMS records show 60km/hr speed limit adhered to and any noncompliance recorded.	Compliant	There were no incidents in the Incident Management System relating to speed limits or driving off permitted access tracks.
			IVMS records show no off- road driving.	Compliant	There were no incidents in the Incident Management System relating to speed limits or driving off permitted access tracks.
			• Equipment maintenance logs demonstrate engines and machinery have been maintained in accordance with required maintenance schedule and have been fitted with noise suppression devices.	Compliant	Equipment maintenance logs were maintained and noise suppression devices fitted to machinery
			• Audit records of lighting at the camp show inward-facing lights that are adequate for safe operations.	Not Applicable	All daylight activities, no lighting required

Table 3: Compliance with Environmental Outcomes and Environmental Performance Standards

			• Daily checklist shows inspection of fences, excavations, pits, storages for entrapped fauna and fauna escapes intact.	Not Compliant	Daily checks of fences, excavations, pits and storages occurred during the reporting period under the McArthur Basin Hydraulic Fracturing Program EMP (STO3-8) up until 5 February 2024. After this time, and up to the end of the reporting period, routine (at least weekly) checks of the sump were undertaken via remote telemetry cameras and site inspections during non— operational periods. These checks would be daily during periods of wet weather.
			• Daily checklist shows all domestic waste receptacles have lids secured.	Compliant	Checklist shows all domestic waste receptacles had lids secured. or were removed from site
			• Audit records show only waste from approved wastewater systems and grey water disposed of to land.	Not Applicable	No relevant regulated activities were undertaken during the reporting period
2.	 well pad i season w through tr forecasts, suppressi undertaki and strict speed lim roads. No introdu species o pathogen abundand weed spe of project 	Dust generation on the well pad in the dry season will be minimised through tracking of wind forecasts, use of dust suppression when undertaking operations, and strict adherence to speed limits on unsealed roads.	• Records show when and where water trucks have been used for dust control including weather condition observations.	Not Applicable	No relevant regulated activities were undertaken during the reporting period
			 IVMS records show no off- road driving. 	Compliant	There were no incidents in the Incident Management System relating to speed limits or driving off permitted access tracks.
		No introduction of new species of weeds or plant pathogens, or increase in abundance of existing weed species, as a result of project activities.	• IVMS records show 60km/hr speed limit adhered to and any noncompliance recorded.	Compliant	There were no incidents in the Incident Management System relating to speed limits or driving off permitted access tracks.
3.		No introduction of new species of weeds or plant pathogens, or increase in abundance of existing weed species,as a result of project activities.	• Site induction records show all personnel have completed site inductions, which include information on weeds in the region and method of spread.	Compliant	All personnel had required inductions in accordance with the Santos Management System.
			• Audit records show weed management plan implemented in accordance with stated schedule.	Compliant	2023 Post Wet Season Weed Survey Report – EP 161 was undertaken in June 2023

			• Hygiene declaration available for all vehicles coming into EP161 on each occasion.	Compliant	Hygiene declaration certificates available for all vehicles coming into EP161
			• Weed monitoring shows no new weed species introduced to work area.	Compliant	Post wet season weed survey showed no increase in abundance of existing weed species.
4.		No fire in EP161 as a result of conduct of the regulated activity.	• Site induction records show all personnel have completed site inductions, which include information on fire risk and impact to landholder for unplanned fire.	Compliant	Site induction records show all personnel have completed site inductions, which includes requirements for managing impacts to terrestrial fauna.
			• Weekly checklist shows SDS available and appropriate and in-test firefighting equipment next to flammable material stores.	Not Applicable	No flammable material stores onsite
			• Weekly checklist shows all vehicles have portable fire extinguishers and operational VHF or UHF radio transceivers.	Not Applicable	No relevant regulated activities were undertaken during the reporting period
			• No use of petrol motor vehicles and audits show all petrol-powered pumps have spark arresters fitted.	Compliant	No use of petrol motor vehicles onsite
			• Training records shows staff trained in use of fire-fighting equipment.	Not Applicable	No relevant regulated activities were undertaken during the reporting period
			• Training records verify that operations personnel participate in at least annual fire and emergency drills.	Not Applicable	No relevant regulated activities were undertaken during the reporting period
			• Records show toolbox meeting discussions of fire risk levels and fire risk management and remedial actions.	Not Applicable	No relevant regulated activities were undertaken during the reporting period

			• Records show daily assessment of fire weather during dry season.	Not Applicable	No relevant regulated activities were undertaken during the reporting period
			• No smoking allowed on site and any instance of smoking recorded as a non- conformance	Compliant	All personnel had required inductions in accordance with the Santos Management System.
5.	No significant impact to the quality and integrity of land and soils resulting from conduct of the regulated activity	No unauthorised physical disturbance to soil.	• Site induction records shows all personnel have completed site inductions in accordance with section 7 of this Environmental Management Plan.	Compliant	All personnel had required inductions in accordance with the Santos Management System.
			• Records show the erosion and sediment control plan implemented prior to the commencement of the activity	Compliant	erosion and sediment control plan implemented during works
			• VMS records show no off- road driving.	Compliant	There were no incidents in the Incident Management System relating to speed limits or driving off permitted access tracks.
			• IVMS records show 60km/hr speed limit adhered to and any noncompliance recorded.	Compliant	There were no incidents in the Incident Management System relating to speed limits or driving off permitted access tracks.
6.		No releases of contaminants (wastes, wastewater, chemicals, hydrocarbons or drilling fluids) resulting in long- term contamination of the soil	• Weekly inspection checklists confirm all hazardous materials and stored and managed in accordance with the EMP, the Code of practice and the WOMP.	Not Compliant	 All hazardous materials and stored and managed in accordance with the EMP, the Code of practice and the WOMP. Site inspections are provided through to DEPWS. During the reporting period, two weeks' worth of reporting were not submitted through to DEPWS 9 February 16 February
			Records of spills and completed remediation in the Santos Incident Management System.	Compliant	No records of spill during the reporting period
			• A record of the assessment of environmental hazards posed by the drill cuttings to determine disposal methods.	Compliant	Recommended disposal options were submitted to DEPWS on the 18 Aug 2023. Consultation with DEPWS is ongoing

			• Daily inspection records confirm the freeboard is sufficient to accommodate the relevant wet season and dry season freeboard requirements, and that the pit integrity is appropriate	Compliant	Daily inspection records confirm the freeboard is sufficient to accommodate the relevant wet season and dry season freeboard requirements, and that the pit integrity is appropriate.
			• Audit records show Bureau of Meteorology provided timely notification significant rainfall event and site evacuation plan put into pace following notification.	Compliant	Bureau of Meteorology provided notification of signification rainfall events
7.	No significant impact on Inland environmental water	No releases of contaminants (wastes, wastewater, chemicals,	Well control monitoring demonstrates adequate well control.	Not Applicable	No relevant regulated activities were undertaken during the reporting period
	quality resulting from conduct of the regulated activity	hydrocarbons or drilling fluids) resulting in long- term contamination of the waters.	Well acceptance criteria met.	Not Applicable	No relevant regulated activities were undertaken during the reporting period
		waters.	• Weekly inspection checklist confirms compliance with the EMP, the Code and the WOMP.	Compliant	No records of spill during the reporting period
			• Records of spills and completed remediation in the Incident Management System	Compliant	Records of spills and completed remediation in the Incident Management System.
			• Road conditions for heavy vehicle transport will be assessed prior to mobilisation on unsealed roads.	Compliant	Road reports and verbal landholder confirmation undertaken prior to heavy vehicle mobilisations
			• Daily inspection records confirm the freeboard is sufficient to accommodate the relevant wet season and dry season freeboard requirements, and that the pit integrity is appropriate	Compliant	Inspection records (visual and remote telemetry) confirmed pit integrity remains appropriate and the freeboard remained sufficient to accommodate the relevant wet season and dry season freeboard requirements during the reporting period. s
			Audit records show Bureau of Meteorology provided timely notification significant rainfall event and	Compliant	Bureau of Meteorology provided notification of signification rainfall events

			site evacuation plan put into pace following notification.		
8.		No reduction to groundwater resource availability in the area as a result of project	• Groundwater extraction volumes at the end of the project provided to DITT and DEPWS.	Compliant	The project is ongoing
		activities.	• Groundwater monitoring results show groundwater quality, extraction volumes and static water level are relatively unchanged and water availability is unchanged.	Compliant	The interpretative report and non-technical summary on groundwater quality was provided to DEPWS on 20 May 2024
9.	No significant impact on air quality and minimise emissions (including greenhouse gas emissions) and their	as a result of project activities. activities. activities.	• Audit records demonstrate vehicles compliant with Northern Territory Motor Vehicle registry regulation and work health and safety regulations.	Compliant	All vehicles compile with vehicles compliant with Northern Territory Motor Vehicle registry regulation and work health and safety regulations.
	impact so that environmental values are maintained		• Real time monitoring and gas detection monitoring data confirms no reduction in air quality / fugitive emissions.	Not Applicable	No relevant regulated activities were undertaken during the reporting period
10.		Minimise greenhouse gas emissions resultant from project activities.	Audit records demonstrate that actual emissions were reported in compliance NGERS	Not Applicable	No relevant regulated activities were undertaken during the reporting period
11.	No impact on the health of the Northern Territory population	Dust generation on the well pad in the dry season will be minimised through tracking of wind forecasts, use of dust suppression when	• Site induction records show all personnel have completed site inductions in accordance with section 7 of this Environmental Management Plan.	Compliant	Records show all personnel completed site inductions during drilling.
		undertaking operations, and strict adherence to speed limits on unsealed roads.	IVMS records show speed limits adhered to.	Compliant	There were no incidents in the Incident Management System relating to speed limits or driving off permitted access tracks.
			• Any off-road has been reported to the supervisor and investigated.	Compliant	There were no incidents in the Incident Management System relating to speed limits or driving off permitted access tracks.
			Stakeholder engagement records demonstrate all reasonable dust complaints	Compliant	Stakeholder engagement records show no complaints were received regarding dust.

			received were resolved; or if unable to be resolved, dust monitoring demonstrates dust emissions comply with the relevant legislation		
12.	Minimise negative impact to communities and enhance the economy	Noise complaints from vehicle movements and drilling activities associate with the project are minimised. Amicable resolution of complaints	• Stakeholder engagement records show active consultation with surrounding stakeholders on any potential noise increase and results of these consultations.	Compliant	Stakeholder engagement records show no complaints were received regarding dust.
13.		Disturbance, injury or death to livestock from vehicle movements and drilling activities minimised through active stakeholder	• Daily inspection records show fences are intact, gates are left in the condition in which they were found and no livestock entrapment.	Compliant	No disturbance, injury or death to livestock from vehicle movements were reported through stakeholder engagement. No drilling activities occurred during the reporting period.
	engagement	active stakeholder engagement	• Site induction records show all personnel have completed site inductions in accordance with section 7 of this Environmental Management Plan.	Compliant	Records show all personnel completed site inductions during drilling Records show fences are intact, gates are left in the condition in which they were found and no livestock entrapment.
			• Stakeholder engagement records demonstrate active stakeholder engagement (i.e. notification prior to the commencement of activities).	Compliant	Stakeholder engagement records show notification prior to the commencement of activities.
14.		Disturbance to landholders from vehicle movements and drilling activities minimised. Amicable resolution of complaints.	• Site induction records show all personnel have completed site inductions in accordance with section 7 of this Environmental Management Plan.	Compliant	Records show all personnel completed site inductions during drilling Records show fences are intact, gates are left in the condition in which they were found and no livestock entrapment.
			• Stakeholder engagement records demonstrate all reasonable disturbance complaints received were resolved; or if unable to be resolved, dust monitoring demonstrates dust emissions comply with the relevant legislation.	Compliant	• Stakeholder engagement records show no complaints were received regarding dust.

15.	Protect sacred sites, culture and heritage	No impact to sacred sites, culture and heritage	• Audit records show that all activities including horizontal drilling occur within the areas shown in AAPA Authority Certificate C2019/043.	Not Applicable	No relevant regulated activities were undertaken during the reporting period
			• Records show that sacred site data provided for it in the GIS is accurate, maintained and updated	Compliant	Maintained a GIS database that includes project areas and cultural heritage sites. This database is updated when additional information is available. This data set in EP 161 was updated January 2022.

Table 4 demonstrates Santos's compliance with reporting requirements in the Code of Practice: Onshore Petroleum Activities in the Northern Territory (Code of Practice) and the Petroleum (Environment) Regulations 2016 (NT).

Table 4: Compliance with mandatory reporting requirements for Code of Practice and Petroleum (Environment) Regulations 2016.

ltem No.	Reference	Requirement	Compliance Status	Evidence
1.	Code cl A.3.5	Geospatial information depicting areas cleared is to be provided to the Minister.	Not applicable	No clearing was undertaken
2.	Code cl A.3.6 (b)	Weed management plan developed as part of the EMP must provide for ongoing weed monitoring.	Compliant	Weed Management plan developed and attached to the EMP was endorsed by DEPWS (Appendix E of approved EMP) contains monitoring requirements. This plan was complied with during the reporting period. The post-wet annual weed monitoring was undertaken June 2023
3.	Code cl A.3.7(a)vi	The fire management plan developed as part of the EMP must provide for annual fire mapping to monitor changes to fire frequency in the relevant areas.	Compliant	Fire management plan, section 7.2 of approved EMP makes provision for this requirement of the Code. In accordance with the fire management plan if a fire has occurred in and around the project footprint, Santos in consultation with the pastoralist and with the pastoralist's approval endeavour to map the extent of the fire and provide that information to DENR. There were no fires in and around the project footprint during the reporting period.

4.	Code cl A.3.9(c) Code cl A.3.9(e)	The rehabilitation plan developed as part of the EMP requires progressive rehabilitation of significantly disturbed land which is required to commence no longer than 12 months following the cessation of activities on the land. It also requires regular maintenance and annual monitoring of rehabilitated areas.	Not applicable	The Rehabilitation Management Plan, section 7.3 of approved EMP makes provision for this requirement of the code. No Rehabilitation activities were conducted as part of this EMP.
5.	Code cl B.4.13.2(c)	 As a minimum, the following must be recorded and reported for each stage (where a stage in this context means all fluids pumped at a particular depth interval): a) total volume of hydraulic fracturing fluid pumped, b) quality of water used (tested for analytes in section C.8 of this Code. Analyses do not need to be repeated if the same water source is used for multiple stages) and c) typical and maximum concentrations of chemicals or other substances used. 	Not applicable	Code cl B.4.13.2 relates to hydraulic fracture stimulation. Activities conducted under this EMP did not include hydraulic fracture stimulation.
6.	Code cl B.4.13.2(k)iv	Where venting is the only technically feasible option for managing produced gas, the technical considerations preventing the use of the recovered gas must be recorded and included in the operator's annual report.	Not applicable	Code cl B.4.13.2(k)iv relates to stimulation and well testing, activities undertaken under this EMP did not include stimulation or well testing.
7.	Code cl B.4.14.2(c)	All new barriers or new well operating envelopes must be verified and clearly documented and reported by submission of an updated well barrier integrity validation (WBIV) report to DPIR.	Compliant	The Tanumbirini 2HST1 Slickline Reports and Inflow WBIV report was submitted to DITT on 7 February 2024
8.	Code cl B.4.15.2(j)	Complete and accurate records of the entire decommissioning procedure must be kept, with these records submitted as part of the legislative reporting requirements for the decommissioning of petroleum wells.	Not applicable	The regulated activity conducted during the reporting period did not include any aspects of decommissioning for the reporting period.
9.	Code cl B.4.17.2(d)	Any guidelines published by the Northern Territory Government from time to time relating to reporting and data submission, and groundwater monitoring data standards must be followed.	Compliant	Reporting and data submission, and groundwater monitoring data standards were in accordance with Preliminary Guideline: Groundwater Monitoring Bores for Exploration Petroleum Wells in the Beetaloo Sub-basin
10.	Code cl C.3(eC)	The components of the wastewater management framework, include; Monitor, manage and report in accordance with the Wastewater Management Plan and Spill Management Plan.	Compliant	The wastewater management plan, Appendix G and spill management plan Appendix H, of the approved EMP makes provision for this requirement of the code. Various daily and weekly inspection reports provided to DEPWS provide outcomes of the routine inspections on storage levels and volumes of pits onsite.

11.	Code cl C.6.1(d)	Wastewater tracking documentation must be reported to the Minister at least annually in accordance with the framework (Spill Management Plan and Wastewater Management Plan) outlined in the EMP	Not Applicable	No relevant regulated activities were undertaken during the reporting period
12.	Code cl C.7.1(d)ii	Wastewater Management Plan must include a program for monitoring and reporting against the effectiveness of the measures for the mitigation of interaction with wildlife, stock and human receptors with wastewater.	Compliant	The wastewater management plan, Appendix G of the approved EMP makes provision for this requirement of the code.
13.	Code cl D.4.3.2(f)	A written report detailing the levels of methane measured, the duration of the unusual readings and the results of the investigation (including remedial actions) must be submitted within one month of the significantly higher-level methane event being detected.	Not applicable	There were no unusual readings of methane detected.
14.	Code cl D.5.9.2(c)	Emissions from exploration, well construction (including during flowback) and workovers must be measured and reports submitted.	Compliant	The emissions report was provided to DEPWS on 30 September 2022
15.	Code cl D.5.9.3(a)	Where natural gas is vented or flared at a gas processing or other downstream facility, emissions must be estimated and reported.	Not Applicable	No relevant regulated activities were undertaken during the reporting period
16.	Code cl D.6.1	All mandated government reporting is complied with; and all detectable leaks and emissions are reported on an annual basis.	Compliant	The Annual Emissions Report was provided to DEPWS on 29 September 2023
17.	Code cl D.6.2(a)	Reports of baseline assessments must be submitted at the conclusion of each field campaign.	Compliant	Baseline assessment reports have been submitted in the form of groundwater monitoring reports, ecological assessment reports and weed management plans appended to the approved EMP.
18.	Code cl D.6.2(b)	Emissions reporting must be in accordance with Section D.5.6. Emissions associated with venting and flaring as described in Section D.5.9 must be provided separately to the Northern Territory Government in accordance with this Code.	Compliant	The emissions report was provided to DEPWS on 30 September 2022.
19.	Regulation 14	A current EMP remains in force until the interest holder notifies the Minister the activity is no longer being carried out and all of the environmental outcomes and obligations under the plan have been met, and the Minister advises the interest holder the notice is accepted and the plan ceases to be in force.	Compliant	The current EMP remains in force.
20.	Regulations Schedule 1, item 9(2)	Interest holders are required to conduct future engagement with stakeholders, in accordance with the description in the EMP.	Compliant	Stakeholder engagement logs indicate that engagement with stakeholders has been ongoing.

21.	Regulations Schedule 1, item 12	Interest holder must notify the Minister, occupier of the land and owner of the land on which the activity is to be carried out before commencement of activity.	Not applicable	Notifications were made in 2021 as previously reported. Not applicable for the reporting period
22.	EMP Section 8.8 Incident Reporting Regulation 33	DEPWS is notified of reportable incidents within 2 hours of the interest holder becoming aware of the incident, or within 2 hours of the incident occurring. A written report must be provided within 24 hours if the initial report was made orally.	Not applicable	There were no reportable incidents during this period.
23.	EMP Section 8.8 Incident Reporting Regulation 34	Reports on reportable incidents are to be provided to DENR as soon as practicable and within 72 hours of the event occurring. A final report must be provided to DENR within 30 days after remediation/cleanup of the affected area	Not applicable	There were no reportable incidents during this period.
24.	EMP Section 8.8 Incident Reporting Regulation 35	A written report of all recordable incidents must be provided to DEPWS not later than 15 days after the 90 day reporting period (unless otherwise agreed).	Compliant	 Reports on all recordable incidents were provided: Q2 2023 report provided 15 July 2023 Q3 2023 report provided 15 October 2023 Q4 2023 report provided 15 January 2023 Q1 2024 report provided 15 April 2024
25.	Regulation 37A	A report about flowback fluid from hydraulic fracturing must be provided to the Minister within 6 months of the flowback occurring.	Not Applicable	No relevant regulated activities were undertaken during the reporting period
26.	Regulation 37B	A report about produced water from hydraulic fracturing must be provided to the Minister within 6 months of the produced water being extracted.	Not Applicable	No relevant regulated activities were undertaken during the reporting period
27.	Environment Protection Act 2019 (NT) div 8	Duty to notify the NT EPA as soon as practicable but within 24 hours of any incident which occurs which causes or threatens to cause material or significant environmental harm	Not applicable	No incidents which could cause or threaten to cause material or significant environmental harm occurred during reporting period.
28.	Waste Management and Pollution Control Act 1998 (NT) s14	Duty to notify the NT EPA as soon as practicable but within 24 hours of any incident which occurs which causes or threatens to cause pollution resulting in material or significant environmental harm.	Not applicable	No incidents which could cause or threaten to cause material or significant environmental harm occurred during reporting period.

3. Summary of Compliance

3.1. Overview of Compliance

Table 5 provides a summary of the results of the compliance assessment against the 103 total compliance items.

Table 5: Compliance Summary

Compliance Indicator	Number	Percentage
Compliant	65	63.1
Not Compliant	4	3.9
Not Applicable	34	33.0

3.2. Overview of items found Not Compliant

The following sections describe the any compliance requirements not met during the reporting period.

3.2.1. Ministerial Approval Conditions

Two non-compliances were recorded against the following Ministerial Approval Conditions:

Condition 1iii: During non-operational periods in the wet season, weekly reports on the freeboard available in drilling sumps (in cm); and

Santos continued to monitor freeboard in the drilling sump via remote water level sensors and camera telemetry during non-operational periods in the wet season. Santos did not send through a weekly report documenting the freeboard availability for the week ending 9 February. Santos rectified this by provided DEPWS with a freeboard update on the 15 February in response to an email received on 15 February titled *'NT Weather Warning: Wet weather controls and freeboard levels*. Santos continues to provide DEPWS with weekly freeboard level updates as per Condition 1iii.

Condition 1v: Weekly reports that detail the outcome of site inspections, and corrective actions taken, and inclusive of all commitments in the approved.

Santos did not send through a weekly report documenting site inspections for the week ending 9 and 16 February. Decommissioning had occurred onsite in the week prior, resulting in the delay of the weekly inspections submitted to DEPWS. Santos provided DEPWS with a weekly checklist update covering the week of the 17 February. Santos continues to provide DEPWS with weekly site inspection report as per Condition 1v.

3.2.2. Environmental Performance Standards

Two non-compliances were recorded against the following Environmental Performance Standards measurement criteria. The three non-compliances relate to the weekly inspection's reports:

Daily checklist shows inspection of fences, excavations, pits, storages for entrapped fauna and fauna escapes intact.

Daily checks of fences, excavations, pits and storages were captured during activities managed under the *McArthur Basin Hydraulic Fracturing Program EMP (STO3-8)* up until February 2024. Routine checks of the sump via remote telemetry cameras and site inspections remain ongoing during non—operational periods. However, camera telemetry does not capture the entire fence parameter.

Weekly inspection checklists confirm all hazardous materials and stored and managed in accordance with the EMP, the Code of practice and the WOMP

All hazardous materials and stored and managed in accordance with the EMP, the Code of practice and the WOMP. Santos did not send through a weekly report documenting site inspections for the week ending 9 and 16 February. Decommissioning had occurred onsite in the week prior, resulting in the delay of the weekly inspections submitted to DEPWS. Santos provided DEPWS with a weekly checklist update covering the week of the 17 February. Santos continues to provide DEPWS with weekly site inspection report.

3.2.3. Regulatory Reporting

Not applicable: compliant with regulatory reporting standards.
